The prediction of 165,000 PCNs is behind the financial estimates. Dave wanted to include network space for up to 250,000 to future proof.

My thoughts are that we get estimates for space allowance/costs for 165, 200 and 250K. As long as we have the option to increase from 165 this should be ok.

Hi,

and I have had a meeting about File sizes. However we need number of PCN's for the future predictions to be added to this document in tabe 2 colum "count".

We have the future projected figures for revenue as attached, but are we happy with these predictions. Are they based on projected use of 140 cameras potentially? I'm worried about file size and if these figures are off on prediction then we could be asking for network.space that is over what we need.

Basically we do not have time for each camera to be surveyed. Each camera does have a sort of rough grading of PCN and a explanation of possible types of contravention but this will still be a rough guesatmate.

Basically are we happy to put the etsimates in??? is there a better way of doing this?

needs this by end of play today
